

In the claims:

Claims 1-9 cancelled.

9. (Currently amended) A mount for an adjustable housing in which a position of the housing on the mount is adjustable, comprising a base plate; at least one adjusting screw for adjusting the position of the housing, said adjusting screw being guided by via a screw thread through the housing, said at least one adjusting screw being provided with a deflecting linkage; a rotary spindle guided on said base plate by said deflecting linkage, said rotary spindle being turnable in order to turn said at least one adjusting screw in said screw thread to provide an adjustment of the position of the housing, said deflecting linkage including bevel gears, and at least one of said bevel gears being mounted on said adjusting screw being movable and pressable against the other or said bevel gears; and an element for moving said at least one bevel gear on said adjusting screw and pressing said at least one bevel gear on said adjusting screw against said other bevel gear, wherein said element is formed as a spring, wherein said deflecting linkage is operative for producing a deflection of a rotary motion of said rotary spindle approximately at a right angle so that rotation of said rotary spindle takes place approximately perpendicular to the an emission direction.

Claims 10, 11, and 12 cancelled.

13. (Original claim) A mount as defined in claim 9, wherein said screw thread is disposed in said base plate.

14. (Original claim) A mount as defined in claim 9, wherein said screw thread is disposed in said base plate in plastic inserts.

Claim 15 cancelled.

16. (Original claim) A mount as defined in claim 9, wherein said screw thread is a thread which is self-channeling when said at least one adjusting screw is screwed in.

17. (Previously amended) A mount as defined in claim 9; and further comprising three such screws which fasten the housing to the mount, and including two diagonally opposed screws each formed as an adjusting screw.
